

Port, package and buildworld problems.

To: freebsd-questions@freebsd.org

I've recently installed FreeBSD on a new machine. I'm still setting things up. 192 ports installed so far. With some failures listed below. I also intended to do a test rebuild of everything, this failed after a few seconds.

This number of failures is a bit worrying, is it normal?

uname -a

FreeBSD alpha 5.3-RELEASE FreeBSD 5.3-RELEASE #0: Fri Nov 5 03:50:01

UTC 2004 root@fanboy.samsco.home:/usr/obj/usr/src/sys/GENERIC amd64

1 - GNUCASH

The gnuCash port fails in gnomeprint:

```
./obj/gdevrpd.o(.text+0x21c): In function `rpd_image_out':
```

```
: undefined reference to `lips_mode3format_encode'
```

```
gmake: *** [bin/gc] Error 1
```

```
*** Error code 2
```

Stop in /usr/ports/print/ghostscript-gnu.

```
*** Error code 1
```

Stop in /usr/ports/print/ghostscript-gnu.

```
*** Error code 1
```

Stop in /usr/ports/print/gnomeprint.

```
*** Error code 1
```

The gnuCash package installs, but:

```
$ gnuCash
```

```
(segmentation fault)
```

The following is from /var/log/messages:

```
Jan 17 14:22:30 alpha kernel: pid 48661 (guile),
```

```
uid 1001: exited on signal 11 (core dumped)
```

2 - RC

freebsd-questions: Port, package and buildworld problems.

The shell port rc installs ok. However if it's made with:
CONFIGURE_ARGS+= --with-readline
the it fails as follows:

```
/usr/lib/libc.a(getenv.o)(.text+0xd0): In function `getenv':  
: multiple definition of `getenv'  
hash.o(.text+0xcd0): first defined here  
/usr/bin/ld: Warning: size of symbol `getenv' changed from 53 in hash.o to 194 i  
n /usr/lib/libc.a(getenv.o)  
*** Error code 1
```

```
Stop in /usr/ports/shells/rc/work/rc-1.7.  
*** Error code 1
```

3 - GHC

```
** Port marked as IGNORE: lang/ghc:  
"is only for i386," "and you are running amd64"
```

This may not be a failure. Perhaps the ports tree contains all the ports, rather than just the ports suitable for a particular architecture.

4 - BUILDWORLD

The command "buildworld" fails shortly after starting with:

```
====> gnu/usr.bin/gperf/doc  
c++ -O -pipe -I/usr/obj/usr/src/amd64/legacy/usr/include -fmemoize-lookups -fsav  
e-memoized -I/usr/src/gnu/usr.bin/gperf/../../contrib/gperf/lib -I/usr/src/gn  
u/usr.bin/gperf -c /usr/src/gnu/usr.bin/gperf/../../contrib/gperf/src/bool-ar  
ray.cc  
cc1plus: error: unrecognized command line option "-fmemoize-lookups"  
cc1plus: error: unrecognized command line option "-fsave-memoized"  
*** Error code 1
```

```
Stop in /usr/src/gnu/usr.bin/gperf.  
*** Error code 1
```
