This is my second post and I wanted to say the replies to my first post were very very helpful, thank you all for what you are doing.

I'm on release 5.4 and I'm attempting to install the DarwinStreaming Server from the ports. I updated my ports first. I then went to the /net/DarwinStreamingServer port and upon my "make clean install" command I get the following:

```
"Please get DSS-v5_0_3_2.zip from  
http://developer.apple.com/darwin/project/streaming/  
And you must accept the APSL. Then, put in  
/usr/ports/distfiles/DDS-v5_0_3_2.zip"
```

Of course I went to the location and could not find any reference to this zip file. I've done an exhaustive search on Google, the BSD site, and the Apple site on "DDS-v5\_0\_3\_2.zip" and got no hits.

I then thought I might do a manual and downloaded the recent DarwinStreamingSrvr5.5-Source from the website. I got it to compile successfully with the ./Buildit command but now the Install script will not work and it appears that if I modified it somewhere I could get it to work but I'm not that advanced and could not find any good examples of the modified script on the web.

I appreciate any help you guys can give me on this one.

Dean Lasiter
