Out of curiosity, to make sure nothing else is non-optimal, what other user accounts were added from 5.4 to 6.0? I cannot recall, did not save anything from 5.4, and never saw anything related to this on any of the documentation on the website. I only knew to do this for DHCP because I strictly followed the Handbook in updating and diff'd the master.passwd files and figured things out for myself.

Did you ``mergemaster -p'` before building world? I did that when I upgraded from 5.4-STABLE to 6.0-STABLE, and noticed that it added the ``_dhcp'` record to ``/etc/passwd'` and ``/etc/group'`, and did ``pwd_mkdb'` as well. As far as I remember, those were the only changes made by ``mergemaster -p'`.

Hello and thank you for the reply. Yes, I did run `mergemaster -p` prior to building world. Perhaps when it showed me the diffs and asked me what to do, that is what prompted me to add the user myself so I knew that all of my custom users and groups would be saved. I assume you opted for the choice of merging the two files?

Raghavendra.
