Ok, call me the curious cat, but I just cvsupped my ports tonight looking for a patch to Xine to fix a problem with MKV playback under KDE 3.5 and got quite the shocker. There were about 101 ports that said they needed to be upgraded. The part that's the kicker is I just upgraded everything about 3 weeks ago. Did I miss something or did something big come down the pipe that caused a major number of ports to be updated? Or is this just coincidence? Just curious.

I've heard of libtool being updated but I ran

```
$ pkg_info -Rx libtool
```

on my system and I don't get any "required by" packages.
