Let's assume for the moment that my PPD is good. I guess I'm looking for something more basic: how do I take the .jpg from my camera and get a photo on my printer. What's the conversion process?

Warner

Your going to have to look at gphoto2 and libgphoto2, and digikam. I don't have a camera anymore so I can't check it to make sure of the exact procedure. I would also expect to be doing it as root until you get the permissions set right.

The camera I used connected to a serial port. There are more options available now with newer cameras.

Don
