Hi,

I want to build a cluster with 2–3 nodes to convert my video files to DVD pretty faster (it takes an ETA of 12 hours right now), but I'm not familiarized with this systems, so if anyone can give me a little help on creating this cluster it's very appreciated!

I have two questions too:

- Is there possible to execute a program manufactured to a single pc and this use all the processors?
- How hard can be this configuration of the cluster and monitoring systems?

Best Regards,

Carlos Silva, CSilva
