I installed FreeBSD 5.2 in my laptop [Acer Aspire 3624WXCi] but when I configured it so the kde started after login in but instead the comes out this lines of error:

```
xsetroot: unable to open display "  
xset: unable to open display ""  
xsetroot: unable to open display "  
startkde: Starting up...  
startkde: Running kpersonalizer...  
kwin: cannot connect to X server kpersonalizer: cannot connect to X server kpersonalizer:  
cannot connect to X server kpersonalizer: cannot connect to X server kpersonalizer: cannot  
connect to X server [repeated to infinite]
```

You have to manually configure X before any X window stuff will work. Check the handbook.
