- 

Im running FreeBSD 6.1-STABLE, got a few KDE packages to update, but fail due to Subversion .. below is the error .. any help//assistance is greatly appreciated.

```
=====
any useful scripts will be installed into /usr/local/share/subversion
====> Vulnerability check disabled, database not found
====> Extracting for subversion-1.4.0_1
=> MD5 Checksum OK for subversion/subversion-1.4.0.tar.bz2.
=> SHA256 Checksum OK for subversion/subversion-1.4.0.tar.bz2.
====> Patching for subversion-1.4.0_1
====> Applying FreeBSD patches for subversion-1.4.0_1
====> subversion-1.4.0_1 depends on file: /usr/local/bin/libtool - found
====> subversion-1.4.0_1 depends on shared library: expat.6 - found
====> subversion-1.4.0_1 depends on shared library: neon.25 - found
====> subversion-1.4.0_1 depends on shared library: apr-1.2 - found
====> subversion-1.4.0_1 depends on shared library: intl - found
====> Configuring for subversion-1.4.0_1
```

You should build `devel/apr-svn' with db4 support to use subversion with it.  
Please rebuild `devel/apr-svn' with option `APR\_UTIL\_WITH\_BERKELEY\_DB=yes' and try again.

Or you can disable db4 support. Only 'fs' repository backend will be available.

To disable db4 support, define WITHOUT\_BDB.

\*\*\* Error code 1

Stop in /usr/ports/devel/subversion.

\*\*\* Error code 1

Stop in /usr/ports/devel/kdesdk3.

\*\* Command failed [exit code

```
1]: /usr/bin/script -qa /tmp/portupgrade.74901.111 env PORT_UPGRADE=yes make
BATCH=yes DEPENDS_TARGET=package
```

\*\* Fix the problem and try again.
