I am making myself an easy install sh shell script that configures my own basic setup on FreeBSD 6.2 Release. Wondering how I tell make when installing a port not to ask me make options/config (silent install). For all ports and or individual ports. Since I have my make options set in pkgtools config for sysutils/portupgrade.  
For example portupgrade -RN /usr/ports/lang/php4  
Will ask me make options which I have already set. How do I hide the options.  
I tried searching a few places before asking with no luck.

P.S.

Thanks FreeBSD Team for another great release so far 6.2 Release is running really smooth on my P4 2.6 i386 system without any problems. By default FreeBSD 6.2 Release works with my re0 1000/baseTX Full Duplex LinkSys Gigabit NIC. Which really impresses me since I have to install a driver on windows 2003 server enterprise before the card works. Not FreeBSD!!!

Thanks,  
Charlie

-DBATCH

For example:  
make install -DBATCH [OTHER SWITCHES]

Hope this helps.

Windows 2003 probably has the driver for your NIC, but can't find because your card is one revision higher, let's say Gigabit 123b, and windows only has a driver for Gigabit123a or something like that. Quite often (~90% of the time) this is the case on Windows 2000 and XP when it can't find a driver. One (or a few) revisions higher or lower doesn't matter for the driver. although I don't have any experience with Windows 2003, I think I can safely assume this is the case for windows 2003 to.

Re: Hide ports make options/config

You will have to select the driver manually.

Martin
