im still working on updating 2 jails. i nullfs mounted /usr/src /usr/obj from my host into my jails, and tried to installworld, but got this error:

```
====> lib/libcrypt (install)
install -C -o root -g wheel -m 444 libcrypt.a /usr/lib
install -C -o root -g wheel -m 444 libcrypt_p.a /usr/lib
install -s -o root -g wheel -m 444 -fschg -S libcrypt.so.3 /lib
install: rename: /lib/INS@eggs to /lib/libcrypt.so.3: Operation not permitted
*** Error code 71
```

```
Stop in /usr/src/lib/libcrypt.
```

```
*** Error code 1
```

```
Stop in /usr/src/lib.
```

```
*** Error code 1
```

```
Stop in /usr/src.
```

```
*** Error code 1
```

```
Stop in /usr/src.
```

```
*** Error code 1
```

```
Stop in /usr/src.
```

```
*** Error code 1
```

```
Stop in /usr/src.
```

the jail manpage is easy enough to follow, but IMO mastering management and maintenance is much more difficult to learn without good documented guidance. i know many have recommended that i try ezjail and such, but im one of those guys who refuses to pay someone to fix my own car until i fully understand why such an operation is too far above my head. same glutton for pain stance for me on computer stuff too... i force myself to understand the canonical methods first, before i start taking advantage of shortcuts.

so... how do i get over or past this error?

thanks,
jonathan
