I just joined this mailing list, SO please forgive me if I violate any rule and please correct me if you can.

Question :

I have been tasked to add support for new architecture (e.g.of architectures are – alpha, amd64, i386, etc likewise we are going to have new architecture) in FreeBSD. Are there any known documents/BKMs/collateral regarding this.

Any pointer/info will be helpful.

I believe, I am looking for collateral which explains or outlines changes required in different config files/makefiles/etc.. to add support for new architecture.

Thanks in advance.
