

Bridging with tap

Source: <http://unix.derkeiler.com/Mailing-Lists/FreeBSD/questions/2007-04/msg02155.html>

Does anyone know anything about ethernet bridging to a tap interface in FreeBSD 6.2. I have compiled the bridge option and the tap device into the kernel, but the tap device has not appeared. I have tried this on a virtual machine and a separate box with the same results, yet it works with FreeBSD 6.1. I used the same configuration in sysctl.conf for both 6.1 and 6.2.

Has anyone had the same problem, or any other problems with tap not working?
