```

I think these files were lost when upgrading os.
I will search these from another freebsd box.

They may be not lost but unreachable due to incorrect module search path. Try something like `kldload /boot/kernel/netgraph.ko`.

If it will work, then you may be needed to update your /boot/loader.rc from the /usr/src/sys/boot/i386/loader/loader.rc.

I had alike problem with modules loading on several boxes after several source upgrades and I have fixed it in a such way.
