i recently rebuilt my system after the xorg 7.2 merge. i built samba3 from ports, and loaded my same config from backup. however, now, when the system starts, i get:

```
[root@athena ~]# tail /var/log/messages
May 30 20:09:41 athena kernel: pid 2081 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2082 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2083 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2084 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2085 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2086 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2087 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2088 (smbd), uid 0: exited on signal 6
May 30 20:09:41 athena kernel: pid 2089 (smbd), uid 0: exited on signal 6
```

and of course, samba doesnt work. but, if i restart samba, it works fine. i have no idea where to start on this one, does anyone have any ideas as to why it would not work right when its started from rc.conf, but if i restart it by hand, its fine?

i am currently running samba-3.0.25,1. started from rc.conf like with `samba_enable="YES"`.

I had the same problem; however, after doing a cold reboot, the problem went away. I have no idea why.
