Guys,

Well, I hate to admit it, but too much "real estate" can be too much. The default resolution has Tito be 1600x1200 where 1280x1024 would work better. I don't find and screen size in my /etc/X11/xorg.conf file. So where is it? And/or which key combo do I have to hit to change thing? -----Actually, I'd rather hardcode this data.

man xorg.conf

example:

```
Section "Screen"
Identifier "Screen0"
Device "Card0"
Monitor "Monitor0"
DefaultDepth 24
DefaultFbBPP 32
SubSection "Display"
Depth 24
Modes "1280x1024" "1152x864" "1024x768" "800x600"
EndSubSection
SubSection "Display"
Depth 4
EndSubSection
SubSection "Display"
Depth 8
Modes "1152x864" "1024x768" "800x600"
EndSubSection
SubSection "Display"
Depth 15
EndSubSection
SubSection "Display"
Depth 16
Modes "1152x864" "1024x768" "800x600"
EndSubSection
```

Re: Howto make resolution less?

SubSection "Display"

Depth 24

EndSubSection

EndSection

/po
