1. Administrator can enforce password expire in /etc/login.conf

In the /etc/master.passwd, login.conf has the fields, but does not implement the functionality, if the manpage is right:

=====

RESERVED CAPABILITIES

The following capabilities are reserved for the purposes indicated and may be supported by third-party software. They are not implemented in the base system.

Name	Type	Notes	Description
------	------	-------	-------------

<...>

expireperiod	time	Time for expiry allocation.
--------------	------	-----------------------------

graceexpire	time	Grace days for expired account.
-------------	------	---------------------------------

=====

But the following fields are working:

=====

warnexpire	time	Advance notice for pending account expiry.
------------	------	--

warnpassword	time	Advance notice for pending password expiry.
--------------	------	---

=====

So this can provide some warnings to the user when it logs in.
