Per instructions from the moderator below i'm making this post to the free-bsd questions mailing list.

I'm building a samba server. I have an XP laptop using putty via ssh to remotley administer. I cannot use putty to logon as root directly. If I logon as my regular user I cannot su/sudo in as root. I tried modifying the sshd_config file with AllowUsers root@ip. This didn't work. Any suggestions? Im somewhat new to UNIX and nery new to FreeBSD, so my indepth knowledge is not the best.

James

Your request to the freebsd-hackers mailing list

Posting of your message titled "ssh logon issue"

has been rejected by the list moderator. The moderator gave the following reason for rejecting your request:

"Best suggestion is to redirect your question to the freebsd-questions mailing list if you don'tsee how to address your issue by editing /etc/ssh/sshd_config.

— postmaster@xxxxxxxxxxx"

Any questions or comments should be directed to the list administrator at:

freebsd-hackers-owner@xxxxxxxxxxx

See what you?re getting into?before you go there
