Hi to all !

Recently I started in my Buss. School a research about the impact of FreeBSD on the open source industry. I exchanged some innital questions and receive good support. At this level I would like to ask FreeBSD some 2nl level questions intented to focalize my research

1. Is there an idea of what % of the markets share is owned by FreeBSD when comparing iwth others O/S such as Red Hat , Ubuntu ? I know this is a very open question what an initial idea would be helpful to me.
2. Usually in what applications are runned over FreeBSD ? I read about FreeNAS as a Storage application built around FreeBSD
3. Usually in what kind of HW does FreeBSD is installed (Laptop, Desktops, Servers ?)

Thanks very much for your support !
