Hi

I have a problem with FreeBSD 6.3. When I boot, I get the message
xl0: watchdog timeout
and I have no networking. I have 3com ethernet card.

If i make ping on localhost it works good. But if i try to ping anything
else it didn't work. When I plug the 3com ethernet card into other
systemblock with FreeBSD 6.2, and activeted it. All worked good.

Help to solve this problem. Maby it is problem with BIOS?

Best Regards,
Mikhail Shpatserman
