Help please.

This is making me crazy. I have a single client and server. Attempting to manually mount the client produces this error.

[udp] server:mount point:RPCPROG_NFS: RPC: Port mapper failure – RPC: Authentication error

rpcinfo -p server results in :
rpcinfo: can't contact portmapper: RPC: Authentication error; why = Client credential too weak

ps-aux | grep rpcbind shows the rpc daemon running...

/etc/hosts.allow has the names of the 3 machines on my network...

Any insights would be most welcome as I am clean out of ideas... duh?
