To: freebsd-stable@FreeBSD.ORG

The following error has been annoying me for some time (well over a month):

```
ps wwwaux
<snip>
root 101 0.0 0.1 864 172 con- I 10:47AM 0:00.01
readproctitle service errors:
```

```
.....
zlib include files differ from library.\nWARNING: ZIPLINKS may
fail!\nWARNING: library 1.1.4, include files 1.1.3\n
```

So, I have attempted to track down the culprit but I cannot seem to figure out what got compiled with the incorrect header files??

This is a 4.8 STABLE that has been built recently (before the problems noted on this list in the past week or 2) and I have portupgrade -ra many times. So, any clues as to how to track this down would be greatly appreciated.

Rick
