I had the same problem under 5.1-RELEASE-p6 and it appears that in the couple of hours of building and coming to work they had released -p7. You may wanna try upgrading your sources and see what that brings about. in the -p7 update there was an update performed on `if_ether.c` (as well as the `openssh` fixes). Just my \$0.02.

Subject: default route

:

: this isn't really a -stable question, but i don't see a -secure-branch

: mailing list, so i didn't know where else to ask (chat? haha right.)

:

: just upgraded a fileserver here to the latest 4.8 (p8).

Re: default route

freebsd-stable: Re: default route

:
: FreeBSD eng.sfo.televoke.net 4.8-RELEASE-p8 FreeBSD 4.8-RELEASE-p8 #14:
: Tue Sep 23 17:30:45 PDT 2003
: mike@eng.sfo.televoke.net:/usr/obj/usr/src/sys/ENG i386
:
: everything came up and seemed to start fine. i then noticed squid
: couldn't reach the 'net -- and neither could anything else. it appears
: the default route wasn't added after the reboot (^ netstat -rn|grep
: default` == null). checking rc.conf,
:
: defaultrouter="my.gw.ip.addr"
:
: which didn't change during the upgrade. nothing in UPDATING wrt route or
: other oddities. did i miss something, or did this only happen on my box?
: just want to know before i start upgrading the rest of 'em.
:
: thanks,
:
