Yes you are right.

> *Point 2) didn't change anything. Not sure it is being used for a*

> *plugin. What symptons did you fix with usin this libgcc_s*?*

Without it I get:

LoadPlugin: failed to initialize shared library

/usr/local/linux-sun-jdk1.4.2/jre/plugin/i386/ns610-gcc32/libjavaplugin_oji.so

[libgcc_s.so.1: cannot open shared object file: No such file or directory]

What's strange is that I tried linux-mozilla with java last night, and it didn't want to work (some "cannot write pipe" error, I didn't write it down). This morning it works fine again. I have no idea why.
