Hello,

I just upgraded xfce (4.10) and get the following when I try access xfce4-panel properties (the panel is also missing from the settings window): 'Multi-Channel Manager Error: No such plugin "xfce"'. I deinstalled and reinstalled xfce4-panel after getting this error – there were no errors reported – xfce4-panel seemed to build without any problems.

How can I fix this?

Thanks,

Warren
