

freebsd-stable: sysctls issue

sysctls issue

Hello,

I think the `net.link.ether.inet.log_arp_movements` and `net.link.ether.inet.log_arp_wrong_iface` sysctls should control the arp messages in `/var/log/messages`. I don't want to see this kind of errors, thus I've set them to 0. Now there mustn't be any arp logs in `/var/log/messages`, must they?

Actually, there has been one since I set the two sysctls:
Jun 28 12:51:42 server kernel: arplookup 195.70.50.6 failed: host is not on local network

Before I set them to 0, there had been much more arplookup messages, just the same as I wrote above. Have I missed something? Or should I post this issue as a bugreport?

Cheers,

Gábor Kövesdán
