Hello,

I am running Fedroa core 5 Dual PIII 800, with VMware server.

I am not sure if or should i install FreeBSD 5.5 stable +SMP kernel!

I am looking at a basic web server config,

Apache 1.3

PHP4

MySQL 4.1

OSCommerce

ProFTP

some sort of mail server also, POP, SMTP.

Its all for the sake of learning it and doing it as of now.

FreeBSD is intalled as a Virutal Machine now.

but after thinking a bit, got stuck with the SMP kernel!
