a) It looks like your message was weirdly truncated – whole "rectangles" of text are missing from the results on the right-hand-side. Maybe you copied it through Excel?

Ummm... hmmm.. i checked the message in the list, nothinng is missing. Just like it was in the putty terminal from where i copied it.

See here:

<http://lists.freebsd.org/pipermail/freebsd-stable/2007-March/033494.html>

c) It would be interesting for the general discussion if you could install a recent server-like version of Linux (e.g. CentOS, SuSE, Debian) on one of the machines you did your benchmarks on to compare results :)

I am not good at linux, but this is an interesting idea. I'll try it. Which one is easier to install?

Both CentOS (aka "repacked RedHat Enterprise Server") and SuSE (actually, openSuSE which is free) are easy to install. But I think you'll have to compile unixbench for them.
