same as ipfw some weeks ago :S  
lucky us that atapicam is an exotic driver and not so widely used and still  
more lucky us that it is atapicam and not ahd or aac right? Sorry dear  
clients our mail cluster is out of service and when it does not work in three  
weeks or so please give me a new call ok ...

First, I don't think atapicam is an "exotic" driver.  
I'm using it for several years (in fact, since it was an  
inofficial patch, before it hit the repository). It's  
working perfectly fine for me, including with today's  
RELENG\_6.

Second, if you run a mission-critical mail cluster (or  
similar things) and update it along RELENG\_6 without  
proper testing, then you deserve to be shot in the foot.

Best regards  
Oliver
