By the way, I am `_not_` using k3b or any other krap. ;-)

Best regards
Oliver

What is Krap to one can be Komfort to another. ;-)

I assist a photographer fiend by maintaining her computers, network and doing backups. Being a photographer in Hawaii means she shoots about 200 weddings a year.

A typical month will run from 80GB to over 200GB depending upon the time of year and other factors. After about 3 months I will archive the projects to DVD. I make two copies of each DVD so that they can be kept in different locations. Some weddings and other projects will be 20GB or more. Trying to divide these projects over the fewest number of DVDs is quite easy with K3B because I can add or subtract individual files as needed to fill the DVD to the maximum.

If someone knows an easy way to do this on the command line I would be more than willing to try it.

dirsplit (<http://freshmeat.net/projects/dirsplit/>) will do the trick nicely.

Roland
