Hello,

Just a quick-ish note to thank everyone involved in making the Xorg upgrade process: thank you all!

I just upgraded a ThinkPad T41 (running 6.2-stable / i386 from early april) following the upgrade process in /usr/ports/UPDATING.

The only "trick" I had to use was this (which I found on the -x11 mailinglist):

```
mkdir /usr/local/oldX11
mv /usr/X11R6/* /usr/local/oldX11/
```

before running mergebase.sh

After that, I created a new xorg.conf (using X -configure) and added my settings to it (keyboard language).

Even xdm works (it still doesn't look good, but it never has)!

Again, thanks for all the hard work!
