Doh, I knew I forgot something in my original email.

Here's the full dmesg: <http://dub.net/rum.dub.net.dmesg>

Here's the controller info:

```
atapci1: <Intel ICH5 SATA150 controller> port
0xec00-0xec07,0xe800-0xe803,0xe400-0xe407,0xe000-0xe003,0xdc00-0xdc0f irq 18 at device 31.2 on
pci0
ata2: <ATA channel 0> on atapci1
ata3: <ATA channel 1> on atapci1
```

I've read that bad SATA cables could cause this, the cables I'm using are brand new but are probably pretty cheap.

Unlike they're both faulty too..

You need to post your dmesg otherwise we have no idea what controller you're using..
