I would like to request that some useful work on networking be MFCed from -CURRENT to -STABLE in time for the release of FreeBSD 6.3. In particular, I'd like to see some of the Netgraph nodes which are new or which have seen extensive development brought in -- ng\_nat and ng\_car in particular. Bringing in the latest version of ng\_nat would allow more flexible in-kernel NAT, while ng\_car (which doesn't seem to be in 6-STABLE at all) would allow burstable traffic shaping -- something that DUMMYNET doesn't have. The latest version of mpd wouldn't be fully usable unless these and other Netgraph code that was developed for it are there....
