Hi!

I have a jail for pureftpd service,
it is possible that inetd from the main system launch FTP server
inside the jail?

No, it's not possible.

I have to correct myself here.

The reason:

When your client connects to the IP of the jail,
inetd.conf running on the main system can start some

jexec <jail-id> /usr/libexec/ftpd ...

But: The <jail-id> depends on the IP the client is connecting to,
and inetd has no lookup-hook to find the <jail-id> from the IP adress.

It might not be too difficult to add this feature to inetd,
but right now, it's not available.

Sounds like writing some script which is started from inetd
and which wraps some jexec call might be possible.
