Hi,

I'm on the market for a USB serial adapter. The Keyspan USA-19HS gets a lot of good reviews for its performance, but I've noticed previous Keyspan models have a history of not supporting FreeBSD due to firmware issues. The 19HS is listed in `/usr/src/sys/dev/usb/usbdevs` with nothing noted about firmware (as opposed to the older 19WQ). Can I assume that the firmware problems of the past aren't relevant to the current 19HS?

Can anyone confirm if a USA-19HS works on FreeBSD 7-STABLE right now?

Thanks,  
Aragon
