Hi all,

for quite a long time I had no troubles but now I need your help again.

We have an old K200 Server with HP-UX 10.20 and FrameMaker5.
Recently we had some incidents where by the FrameMaker process stoped without warnings.

From the core file I extracted this hints:

```
/lib/dld.sl  
ERROR couldn't open dld.sl  
ERROR reading dld.sl  
ERROR bad magic number/system id for dld.sl  
ERROR bad dld.sl hpux aux header
```

Nothing changed on the system in the past and I have no idea what went wrong.

TIA and I will summarize of course!!

Bye

Lutz Sommerfeld
