Hi Admins,

Kindly help me in solving the prob:

I have a rp4270 box which was working fine with hpux 11i..installed a bundle for language support and the kernel got rebuilt and server got rebooted..

After that system gets struck with the msg

```
**SYTSEM ALERT**  
Alert Level 12 = Software failure  
type 20 major change in system state  
and lot of msgs..
```

And in the end it gives an Choice to acknowledge or disable the entries and when i try with either of them the system does a dump and gets reboot..

I tried booting thru ISL with

```
hpux -is  
hpux -is (;0)/stand/vmunix  
hpux -is (;0)/stand/vmunix.prev  
hpux -lm (;0)/stand/vmunix  
hpux -lm (;0)/stand/vmunix.prev
```

nothing works out..kindly give your suggestions..

Thx

Solomon
