Hi Keshav,

1. try to => export TERM=vt220 and use the vi command again
2. the client from where you try to telnet to the server maybe trying to resolve the ip via dns and this response takes to long.

Check if the ip is in the local hosts file, if not add the ip. Check the /etc/nsswitch.conf file and maybe change it to the following entry => hosts: files [NOTFOUND=continue] dns

Hope it helps,

Klaus

Subject: [HPADM] vi not working...

Hi all,

I have 2 small questions:

1. When I use the vi command I get the foll response. What could be wrong? \$ vi

hp70094: Unknown terminal type

Visual needs addressible cursor or upline capability

:

2. While connecting to HP-UX using telnet, it takes a loooooong time to get a response. Thereafter response is quite fast. What could be wrong? Where should I start looking?

THanks in advance...

keshav
