Hello Admins:

I have a problem getting a remote print queue to work
both systems are at HP-UX 11.0

I have a printer setup and named lst16 on a system
in Canada, and I have a local system here that I have
defined and setup a remote queue xxxlst16
the remote queue was setup using SAM.

I have tested the lst16 printer in Canada on the system in
Canada and all works OK when a print job is queued up there.

The remote printer queue is enabled and ready here, but when I queue
up a job to be sent to the remote printer I get the error

Warning: xxxlst16 is down

and the print job just sets there in the queue, of course when
I try to re-enable the printer it then almost immediately goes
down again.

I have been all through the archives and have not found anything
specific to this.

Any help would be much appreciated.

Thanks.
