To: hpux-admin@DutchWorks.nl

Sorry about this posting but I just find out that I didn't activate the codeword supplied by HP to activate the software. The Applications CD I used to install was already unlocked for the ANSI/C bundle so I was able to install but it copied only 0 byte binaries to the /opt/ansic/ directory.

rgds,

Peter

Hi,

\

I've searched the archive to if I missed out on something when installing the ANSI/C developers bundle but can't really find anything related to configure the ANSI/C after installation.

I've installed the bundle and got /opt/ansic/ created along with /opt/langtools.

It automatically changed the sym.link to point /usr/bin/cc to /opt/ansic/bin/cc

Now whenever I call cc nothing is returned I get the prompt back immediately.

I've got the feeling I have to do some more configuration but can't find any related docs.

Any Help appreciated.

Peter
