Thanks to everyone that responded. I did indeed need to extend the FS. I had thought that SAM would automatically take care of that for you, but obviously it did not do that. Thanks once again to everyone that responded.

Did you extend the filesystem after you resized the logical volume?

Hello fellow admins,

I have extended one of my logical volumes through sam from 1G to 2G and for some reason the system still thinks the partition is a 1G partition. If I do an `lvdisplay` of the logical volume, it properly displays as a 2G partition, but `bdf` shows it as a 1G partition that is 100% full and not as a 2G partition that should be around 49% full or so. Anyone have any ideas on how to get the system to properly see this newly extended logical volume. Thanks in advance, will summarize.
