Hi HP Gurus...

This might be a simple one for most of you....

But here it goes....

I cat a file e.g /etc/issue

But I have a line

Welcome to `uname -n`

And as you know it will not show the name as requested..  
but will display..

Welcome to `uname -n`

What I can do is I can make a small script to append this line into the /etc/issue..

But wonder if there is any other way this can be achieved...

Hope I explained my query well...

In short can catting a file run the command in this case `uname -n...`

Thanks for ur time...

Deepak Cutinha
