Light attention is blinkingHi Ruby

It's OK.. You can proceed with the same . But make sure from your dial in software you turn on GSP logs to be analyzed later.

Thanks and Best Regards
sudhansu

Subject: [HPADM] Light attention is blinking

Hi Admins,

Can you tell me how can I see the cause why one of our server's Light attention is blinking? Btw, I am administering the server remotely. Any logs?

I checked the ITRC to see related cases, I got one. And here it is:

Let me know your views/comments.

PROBLEM

The ATN light is flashing because there are events in the Event Logs that needs to be viewed by the operator. After viewing the events the light will stop flashing.

CONFIGURATION

A Class (all models)

RESOLUTION

A-CLASS systems.

RESOLUTION

To view the Event Logs:

HP-UX-Admin: [HPADM] RE: Light attention is blinking

- 1- At the console, go to GSP (CTRL+B).
- 2- At GSP prompt type "SL" and choose "E" for Event Logs.
- 3- Answer "N" for filter option.
- 4- Next the system will display the events, take appropriate action to correct them, or for example, they can simply be messages of a past power failure.
- 5- Press "Q" to quit and exit GSP. (no need for reboot)
- 6- In the next minute or so the light should stop blinking.

Thanks,
Ruby Ann Domalanta
