Hello Admins,

Does anyone have an imap server running on HP-UX 10.20.
After installing `imapd` under `/usr/local/sbin/` and putting in

```
imap 143/tcp imapd # IMAP mail service
```

```
in /etc/services
```

and

```
imap stream tcp nowait root /usr/local/sbin/imapd imapd
```

```
in /etc/inetd.conf
```

I issued the command

```
inetd -c
```

to reread `inetd.conf`

My `/var/adm/syslog`

gives me

```
Jan 20 12:47:37 hostname inetd[672]: imap/tcp: Unknown service
```

What else do I have to do to activate the service?

I was also unable to activate secure pop (`pop3s`)

Are these services not recognized in 10.20? How about in 11.0?

Thanks in advance

Mr. Kelly Choo,
