Does anyone know how to receive traps from external hosts on a pre-assigned port, 162 in our case, but reroute them to another port for action? We are trying to integrate traffic from (Compaq's then HP's) Insight Manager, which sends it's information to port 162, reroute it to a different port outside of the HP-UX root owned defaults (1023 and below) to perhaps 1162 so we can grab it with a different product we are implementing, Managed Objects Formula, so that we can integrate Insight Manager information into Formula. Any help would be greatly appreciated, thanks everyone!

Mike Brown,
MiABrown@gapac.com
