Thanks to all the people who responded reference my question on this bug with mib2agt.

Everyone pointed to needing to have patch PHSS_27858 installed (which I did), however Mike Keighley also mentioned that I need to have patch PHSS_28776 (superseded by PHSS_28953) which was a second patch I did not find mentioned in ITRC before. When I restarted snmpd, I noticed that mib2agt jumped to about 100%, but then slowly it got down to a normal minimal percent utilization. I will continue to monitor this and see how things go from there.

Thanks once again to everyone on the list, you have proven invaluable many times.
