This list rocks, as usual!

Thanks to:

Harry.Pfeffer@rrd.com

Stan.Stewart@aventis.com

Harry had the winning answer. The following syntax was quite successful:
omnidb -filesystem hpux68-omni.hertz.com:/cms /cms/processed -session
2004/05/12-76 -catalog

Although that works, getting the -filesystem argument correct is still a
pain.

It must be Client:MountPoint Label exactly as it was in the backup
session.

Cheers,

Jim

Subject:

[HPADM] omniback 4.1 omnirpt

Hi folks,

Does anyone know the proper invocation of "omnirpt" and/or "omnimm" in order to see the full list of files (not just objects) backed-up in a session?

I can get the objects (mountpoints) with "omnirpt -report session_objects -session 2004/05/12-76", but I've got a user asking for a list of files/dirs *in* the objects that were backed-up.

Thanks,
Jim
