Thanks to Sridhar Kasula and Bill Hassell for responding. Sridhar's solution (shown below) worked great.

```
swmodify -u CPB_33706.* CPB_33706
```

Cheers,
Jim

Subject
[HPADM] unbundling patches

I'm having a stupid attack and need a quick bit of help. I've got a patch bundle in depot format on CD: CPB_33706

After I swcopy the bundle to a local depot, what is the incantation of swmodify that will remove the bundling and leave the individual patches in the depot? I've done this once before a few months ago, and i'm smacking myself dizzy because I didn't write it down.

Thanks!
