Hi all,

We've had anonymous FTP access enabled on a particular server and it has been working fine, but now it will not allow anonymous login.

Last weekend I converted the server to be a trusted system, I don't know if this is related, but it's the only change I'm aware of on the system lately, apart from a reboot last weekend also (unrelated to the trusted system conversion).

The ftp user is there, '\*' as the passwd field (both /etc/passwd and the file in /tcb), ftpaccess appears ok (last modified quite a while back) and appears to be setup as per any documentation I've found so far.

When I try to ftp to the server as either user 'anonymous' or 'ftp' it returns an error message:

530 Guest login not permitted.

Login failed.

Anyone come across this problem with trusted systems, or can suggest anything can do to get anonymous ftp working again?

Tia,

Kevin.
