Hi managers,

Sorry for the late summary. I have received many responses, too many to list here. All of them are very helpful and valuable addition to my admin knowledge. Thanks for all of you replied!

Many suggest me to use scp and go with the ssh features, authentication key feature (PermitRootLogin=Yes.) I tried to avoid typing password for each box, ended up temporarily enabling remote logging in without password and execute the script.

Some mentioned expect script, use component Tcl etc, which I wish I had more time to explorer.

Other solutions/resources I've received are:

rsync + ssh, search through the web.
distributed shell, <http://dsh.sourceforge.net>
How to send passwords through expect:
<http://www.cpqlinux.com/expect.html>
"cfengine"
"masshosts"

Thanks! All of you!

Meg
