To: sunmanagers@sunmanagers.org

>Hello,

>

>In my Sisyphean task to fight spam I have initiated an

>Feature(*mail_access*) directive for *sendmail*. I have one pernicious spammer

>that uses different urls (big surprise) but always uses the same box – for

>example in the access document one can place: *spammer@uce.biz*, or *uce.biz*

>in that access file to deny/grant access those listed.

>

>The actual spammer uses "*fep5.(compromisedserver).TLD*

>

>Question:

>

>Can one use wildcards *"*"** in this directive?

>

>Example:

>

>If the receipt came from

>

>*ucedistro.uce.biz*

>

>Can one place:

>

>*ucedistro.*****.biz*

>

>To handle the shifting URL?

>

>Thank you,

>

>David
